

Alleima® 316LVM

Bar

Datasheet

Alleima® 316LVM is a vacuum remelted, molybdenum alloyed, austenitic stainless steel.

The grade is characterized by:

- High strength
- High fatigue strength
- Excellent microcleanliness
- Excellent structural homogeneity
- High surface finish

Standards

- UNS: S31673
- DIN: X 2 CrNiMo 18 15 3

Product standards

- Bar and wire: ASTM F138

Chemical composition (nominal)

Chemical composition (nominal) %

C	Si	Mn	P	S	Cr	Ni	Mo	Cu	N
≤0.025	0.6	1.7	≤0.025	≤0.003	17.5	14	2.8	≤0.10	≤0.10

Applications

Alleima® 316LVM is used for implant applications; hip stems, femoral heads, spinal systems, acetabular cups, intramedullary nails, bone screws, knee joints, and pins, bone and nail plates, internal fixation devices, dental implants, staples.

This grade is also used for cardiovascular applications: guide wires, cardiac stents and for surgical instruments and tools; blood lancets, stylets, trocars.

Corrosion resistance

Alleima® 316LVM has very good resistance in physiological environments to:

- General and intergranular corrosion due to high purity and low ferrite content
- Pitting and crevice corrosion due to the high molybdenum content

Alleima® 316LVM is capable of passing the Money Penny Strauss intergranular corrosion test, in accordance with ISO / ASTM requirements.

Forms of supply

Alleima® 316LVM is supplied as both billet and hot-rolled round bar.

Other product forms

Alleima® 316LVM can also be supplied as tube (thick wall or thin wall) and wire.

Mechanical properties
