

Alleima® High-N medical wire

Wire

Datasheet

Alleima® High-N is a molybdenum and nitrogen alloyed austenitic stainless steel, used for orthopedic implants and fracture fixation devices.

The grade is characterized by:

- Proof strength is up to twice that of Alleima® 316LVM in the annealed condition
- Higher corrosion resistance than Alleima® 316LVM
- High microcleanliness
- Very good surface finish
- Good forgeability

Standards

- UNS: S31675
- BS: 7252-9

Product standard

- ASTM F1586

Applications

Alleima® High-N grade is used for hip and knee joints and fracture fixation devices.

Corrosion resistance

Alleima® High-N has a very good resistance in physiological environments to:

- General and intergranular corrosion due to high purity and low ferrite content
- Pitting and crevice corrosion due to the high molybdenum content

Alleima® High-N is capable of passing the Moneypenny Strauss corrosion test in accordance with ISO / ASTM requirements.

Forms of supply

Wire

Wire can be delivered in the following size ranges.

Spools/coils: diameter 0.1-6 mm

Drawn in straight lengths or ground straightened lengths: 0.6-6 mm

Tolerances

h8: ground finish as standard (tighter tolerances can be offered on request)

h9: drawn and straightened

Other product forms

This material can also be supplied as bar (round) and tube.
